

Nozzles are installed in optimal areas around the barn and in the stalls.

Additional nozzles can be placed throughout the barn for maximum fly control.

The system can be mounted on a wall or on top of the 55 gallon poly drum.

Flyaway's proprietary misting system is the ideal solution for fly and mosquito control in and around barns, restaurants, special event venues, and residential backyards. Our misting system works great in small, confined areas such as horse stalls or even in much larger areas for control of the entire barn and backyard living space. The system is designed to effectively control flies and mosquitoes that can cause health problems and become a nuisance to both animals and humans.

### THE PROCESS System Installation

- Flyaway offers support to DIY'ers and professional installers to help with the installation of our system.
- This high-level overview helps facilitate the actual installation process and can be customized based on your level of expertise.
- The goal is to provide a best-in-class experience and system to protect outdoor spaces from mosquitoes and flies.
- Identify breeding and resting sites.
- Design the misting system layout to create protection zones.
- Ordering misting system, tubing, nozzle setups parts and supplies for successful installation.
- Once installed, testing of mist pattern to ensure adequate coverage.
- Customer knowledge transfer on their new state of the art fly and mosquito misting system and use of remote control if and when needed.

### HOW IT WORKS Automatic System

- The system is pre-set to mist at times when the flies and mosquitoes are most likely to be present.
- The system is capable of running several times daily to control the target insect. For flies, we recommend 5-6 times a day. For mosquitoes, we recommend 3 times a day. Automatic timed mist settings can be changed to customer preference as well as duration. We recommend 30-50 seconds per timed treatment.
- Flies / mosquitoes flying or resting in the protection zone are immediately hit with a lethal dose.
- Ongoing misting cycles help create a barrier which keeps mosquitoes away.

### SYSTEM INFO About the Misting System

- System comes with 1/2 HP motor with a 140 gph pump that can operate up to 90 nozzles in a fully looped system at 200 psi.
- Weather resistant tough polyurethane outer shell protects the control panel, motor and pump from outdoor wear and tear and animals.
- Tamper proof lockable enclosure.
- Digital controller with programmable run schedule.
- Metal mesh filter to protect nozzles from clogging.
- Digital control module with advanced capabilities.
- Two remote controls are provided to allow for additional treatments as needed.
- Tank mount brackets available for easy installation to protect top of barrel (additional purchase).
- Volume purchases and dealer discounts available.
